6.5.1 **Activity-on-Vertex (AOV) Networks**

- A digraph G with the vertices represent tasks or activities and the edges represent precedence relations between tasks.

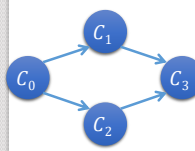

Predecessor :
Vertex i is a predecessor of vertex j , iff there is a directed path from vertex i to vertex j .

79

Topological Order

- A **linear ordering** of the vertices of a graph such that, for any two vertices i and j , if i is a predecessor of j in the network, then i precedes j in the linear ordering.

$C_0 \rightarrow C_1 \rightarrow C_2 \rightarrow C_3$ (O)

$C_0 \rightarrow C_2 \rightarrow C_1 \rightarrow C_3$ (O)

$C_0 \rightarrow C_2 \rightarrow C_3 \rightarrow C_1$ (X)

AOV Network of Courses

Use **topological ordering** to generate a linear order list.
This list represents one possible way to take all the courses

Topological Ordering

- Iteratively pick a vertex v that has no predecessors.
 - Use an additional field "count" to record the "in-degree" value of each vertex.

Running Example

```

adjLists
0 [0] → 1 → 2 → 3 0
1 [1] → 4 0
1 [2] → 4 → 5 0
1 [3] → 5 → 4 0
3 [4] → NULL
2 [5] → NULL
  
```

Ordered list:
