

# Acknowledgments

Firstly, I thank my parents for their love, nurturing, and non-stop support throughout my whole life.

I thank my advisor, Prof. Roger Jang. His giddiness, support, encouragement were invaluable in pointing me in the right direction. I also thank J.T. Chen, he opened up several key concepts that shaped my educational experience and spent a lot of time in discussing about my research. As well as Gavin Lin, I thank for his knowledge and experience in speech technology, and this thesis would not have been possible without his support.

Finally, I thank for everyone in the lab. We worked hard and played hard together in the passed year, and I would keep you in my mind for rest of my life.
